Convex Functions and their Applications

A Contemporary Approach

Niculescu, C.; Persson, L.-E.

2006, XVI, 255 p. 8 illus., Hardcover

ISBN: 0-387-24300-3

Contents

Preface	VII
List of symbols	XIII
Introduction	1
1 Convex Functions on Intervals	7
1.1 Convex Functions at First Glance	7
1.2 Young's Inequality and Its Consequences	14
1.3 Smoothness Properties	20
1.4 An Upper Estimate of Jensen's Inequality	27
1.5 The Subdifferential	29
1.6 Integral Representation of Convex Functions	36
1.7 Conjugate Convex Functions	40
1.8 The Integral Form of Jensen's Inequality	44
1.9 The Hermite–Hadamard Inequality	50
1.10 Convexity and Majorization	53
1.11 Comments	60
2 Comparative Convexity on Intervals	65
2.1 Algebraic Versions of Convexity	65
2.2 The Gamma and Beta Functions	68
2.3 Generalities on Multiplicatively Convex Functions	77
2.4 Multiplicative Convexity of Special Functions	83
2.5 An Estimate of the AM–GM Inequality	85
2.6 (M, N) -Convex Functions	88
2.7 Relative Convexity	91
2.8 Comments	97

3	Convex Functions on a Normed Linear Space	101
3.1	Convex Sets	101
3.2	The Orthogonal Projection	106
3.3	Hyperplanes and Separation Theorems	109
3.4	Convex Functions in Higher Dimensions	112
3.5	Continuity of Convex Functions	119
3.6	Positively Homogeneous Functions	123
3.7	The Subdifferential	128
3.8	Differentiability of Convex Functions	135
3.9	Recognizing Convex Functions	141
3.10	The Convex Programming Problem	145
3.11	Fine Properties of Differentiability	152
3.12	Prékopa–Leindler Type Inequalities	158
3.13	Mazur–Ulam Spaces and Convexity	165
3.14	Comments	171
4	Choquet’s Theory and Beyond	177
4.1	Steffensen–Popoviciu Measures	177
4.2	The Jensen–Steffensen Inequality and Majorization	184
4.3	Steffensen’s Inequalities	190
4.4	Choquet’s Theorem	192
4.5	Comments	199
A	Background on Convex Sets	203
A.1	The Hahn–Banach Extension Theorem	203
A.2	Separation of Convex Sets	207
A.3	The Krein–Milman Theorem	210
B	Elementary Symmetric Functions	213
B.1	Newton’s Inequalities	213
B.2	More Newton Inequalities	217
B.3	A Result of H. F. Bohnenblust	219
C	The Variational Approach of PDE	223
C.1	The Minimum of Convex Functionals	223
C.2	Preliminaries on Sobolev Spaces	226
C.3	Applications to Elliptic Boundary-Value Problems	228
C.4	The Galerkin Method	231
D	Horn’s Conjecture	233
D.1	Weyl’s Inequalities	234
D.2	The Case $n = 2$	237
D.3	Majorization Inequalities and the Case $n = 3$	238
	References	241
	Index	253
